

## Type U and UU thermistors connection to OM-SQ2010/SQ2020/2040

In logger Set-up screen double click in Sensor Type column of input channel required. (Block A is shown) but can be A, B, C, D, G, H, J or K input block depending on the model type of the logger.

Select range as below then click OK.

For next probe double click in next channel Sensor Type column Select range as below then click OK.

If more probes are required repeat above procedure with next channel.  
Up to four probes can be connected to each block.

Save and send set up to logger.

Connect Probe wires as follows

Connect one wire to terminals 1 and the other to terminal 5.

Thermistor probes have no polarity so can not be connected the wrong way around.

But if the cable does have a one bare screened wire connect that to terminal 5 (Common input terminal for all the probes).

Next probe one wire to terminals 2 and the other to terminal 5.

Next probe one wire to terminals 3 and the other to terminal 5.

Next probe one wire to terminals 4 and the other to terminal 5.
